

Dear Students

Welcome to the course on ELECTRONIC SYSTEMS and TECHNOLOGIES.

The course aims at giving you a full spectrum outlook of what electronics is and why it is so pervasive in nowadays society. I think that this can be indeed important for you as a future manager, to better face the challenges of your professional activity irrespective to the core business of the company you will be hired in.

Before starting, I would like to give you few information in order for you to enjoy the course better:

- The course will be delivered on-site. But lessons will be recorded, broadcasted in real time and available for double-checking till the end of the course;
- The slides of the lessons and all necessary material related to the course will be available on my website : <https://sampietro.faculty.polimi.it/> by clicking on the course title. I will update the site lesson by lesson.
- You will be asked during the course to act as invited speakers presenting the results of given research on specific subjects, that will be defined together, on subjects connected to management, finance or strategic planning of microelectronic industries. These 15 minutes oral presentations will be part of the final judgement.

More in the first lesson, soon.

Hoping that the course will satisfy your curiosity and expectations, please accept my best regards,

Marco Sampietro
